

Mosaic, Random Veneer

Random, mosaic stone veneer is irregularly shaped with no definite pattern. Mosaic stone veneer can be used for chimneys, fireplaces, interior and exterior walls. Also suitable for copings, walkways or patios when a thicker stone is desirable.

Roughly Squared & Rectangular Veneer

Roughly squared and rectangular stone veneer is cut to approximate a more angular style but is not intentionally cut to be exact 90° squares and rectangles.

Ashlar Veneer

Ashlar stone veneer is a strip pattern consisting of stone which are square and rectangular in shape but wider than they are tall and set in a broken, running bond pattern.

Ledge stone

Thin strips of stone similar to ashlar veneer but generally smaller heights, approximately 1" to 3", depending on the stone.

Irregular Flagging Stone

Irregular flagging is random, "broken" shapes with no definite pattern. The top surface is the natural face of the stone revealing varying amounts of texture depending on the type of stone. Sizes are suitable for walking on. Irregular flagging stones are suitable for walkways, paths, patios, pool decks and can be used for interior or exterior applications.

Dimensional, Random, Pattern Flagging

Random Pattern Flagging or Dimension Flagging refers to mixed sizes of square and rectangular cut paving stones. Most Pattern Flagging is cut undersized to allow for a joint. Many Pattern Flaggings are only available in specific sizes.

Wallstone

Stone of suitable size and type for building walls either with or without cement. Wallstones can vary from blocky, to thin, flat or round shapes and can have varying amounts of small to large pieces. All of these factors contribute to the final look of a wall. A limited number of wallstones are also sorted by size and shape such as Thinwall, Heavy Wall and Uniform Rise.
