

## Large Stepping Stones

*Product and Description*

### Description

Large Stepping Stones are slabs of sandstone selected for their uniquely weathered surfaces and large irregular size. Many stones have moss and lichen on them.

### Standard Sizes

2" to 6" thick x 3' or larger in one dimension.

### Approximate Coverage

40 square feet per ton. An average pallet of 1.5 tons covers about 50 to 70 square feet (coverage varies with joint width and stone thickness).

### Application

Ideal for rustic paths or patios, Large Stepping Stones can also be used as natural steps.

### Selling Unit

Large Stepping Stones are sold by weight. There are approximately 8 to 12 stones per pallet which weighs an average of 1.5 tons.

Stones can be purchased individually.
